OBJECTIVE

FinTech undergraduate with a dual interest in software development and design, seeking to apply academic knowledge in Python, SQL, OOP, and database systems alongside hands-on design experience to build intuitive, technology-driven solutions. Eager to contribute to innovative projects, grow through collaborative environments, and bridge the gap between technical functionality and compelling user experience.

EDUCATION

Bachelor of Financial Technology • CGPA: 3.03

FAST National University of Computer and Emerging Sciences 2024 – Present

FSc Pre-Engineering • 78%

St. Lawrance Girls Govt. Degree College 2022 – 2024

SSC Biology • 89%

Gulistan Shah Abdul Latif School 2020 – 2022

SKILLS

Technical

- Programming: Python, C++, OOP principles
- Databases: SQL, PostgreSQL, MS Access — schema design, queries, normalisation
- Data Analysis: Stata (OLS regression, clustering, descriptive statistics)
- Data Processing: Pandas, NumPy (used in Python-based project work)
- Frontend: Python Tkinter (desktop GUI development)
- Tools: Microsoft Office Suite (Word, Excel, PowerPoint), QuickBooks

Design

- Graphic Design: Adobe Illustrator, Adobe Photoshop, Canva
- Visual Branding: event campaigns, consistent brand identity, social media content

EXPERIENCE

Data Analyst Intern — DecodeLabs

- Worked on hands-on technical and analytical tasks in a collaborative environment, focusing on problem-solving, project development, and practical application of core concepts.
- Gained experience working with real-world datasets, contributing to assigned projects while improving skills in teamwork, communication, and time management.
- Strengthened understanding of industry practices through guided learning, peer collaboration, and task-based execution.

Design Co-Head — PROCOM, ACM-W & FES — University Societies

- Leading the design team in creating and managing visual content for events and campaigns.
- Maintaining consistent branding across all society communications and timely execution of deliverables.
- Overseeing design planning, task delegation, and coordination with core committee members.

Public Relations Member — DEVDAY'25

- Conducted outreach calls and managed participant communication for the event.

- Maintained professional coordination with external stakeholders.

Volunteer — *IDA Rieu School for the Blind & Deaf*

- Supported event activities and assisted in coordinating with students in an inclusive environment.

Volunteer — *Children's Day Event* — *CBS University Society*

- Assisted in organising and managing event activities and ensured smooth coordination.

ACADEMIC PROJECTS

HR Management System | *Introduction to Databases*

- Built a full-stack desktop HR system with a PostgreSQL relational backend and Python Tkinter GUI.
- Designed normalised schemas and wrote SQL queries for employee, payroll, and department data.
- Implemented a CSV-based attendance module for daily record logging and retrieval.

Stack: PostgreSQL • Python • Tkinter • SQL • CSV

Cab & Delivery Management System | *Programming in Business*

- Owned the Driver Module in a team-built integrated single desktop application.
- Handled driver data, trip assignment, and state management using Pandas DataFrames and NumPy.
- Used CSV files for persistent data storage across all integrated modules.

Stack: Python • Tkinter • Pandas • NumPy • CSV

Student Management System | *IT in Business*

- Designed eight functions covering Students, Courses, Fees, Exams, Hostels, Attendance, Enrollment, and Teachers.
- Integrated MS Access as the relational backend; produced ERDs documenting all entity relationships.
- Generated analytical reports and visual outputs using Excel and Word.

Stack: Python • MS Access • ERD Design • Excel

Hotel Management System | *Object-Oriented Programming*

- Built in C++ applying abstraction, encapsulation, inheritance, and polymorphism across class hierarchies.
- Modelled room booking, guest records, and billing in a clean, modular architecture.

Stack: C++ • OOP • Encapsulation • Polymorphism • Inheritance

Banking System | *Programming in Business*

- Terminal-based Python application with PIN authentication, three-attempt lockout, and full transaction history.

Stack: Python

Trade Openness & Productivity — Cross-Sectional Study | *Data Analysis II*

- Co-authored research on 25 developed nations using World Bank WDI data.
- Led OLS regression modelling with robust standard errors; interpreted Trade % of GDP, FDI, and mobile subscription coefficients.
- Authored the proposed solutions section.

Stack: Stata • OLS Regression • K-Means Clustering • Cross-Sectional Analysis

Financial Records & Trial Balance | *Accounting — Team Leader*

- Led a team in recording and processing 100 transactions through to post-closing trial balance.
- Ensured accuracy, timely submission, and reconciliation of all financial entries.
